human abotulinum antitoxin. The focus of the position is to exercise control of the establishment of the collection, processing, storage and distribution of plasma. Professional training will be required and furnished as necessary for the competent performance of their assigned functions to ensure that the final product has the safety, purity, potency, identity and effectiveness to be used to manufacture a therapeutic human botulinum antitoxin. Facilities provided for the collection of plasma will be maintained in a clean, orderly manner by this person so the withdrawal of blood from equine donors can be performed with minimal risk of contamination. The storage and quarantine of the finished product will be handled by this person as well as the other members of the research team in the GMP section. Additional duties include post production processing, handling and shipment of plasma.
