Job Description

The [School of Dental Medicine](#) at the University at Buffalo is seeking applications for a **Bioinformatics Analyst** in the [Department of Oral Biology](#). A bioinformatics analyst is needed for computational and statistical methods to analyze biological data. This position requires this individual to work with researchers in biomolecular fields to utilize existing and develop new methods for studying gene expression, bacterial composition and other types of complex data sets, including clinical data.

The responsibilities include:

- Organize and curate a database of 16S rRNA genes derived from metagenomic data and establish a pipeline for clustering, phylogenetic placement and taxonomic assignment of new sequences as new metagenomes are added
- Implement an automated pipeline for extraction of High-Quality genomes from metagenomes
- Support the management of 'omics data from study investigators publicly available resources
