Job Description	

Position Summary

As a **Network Applications and Automation Engineer** you will support the network monitoring, configuration, and automation in the [Network and Communications Services](#) (NCS) unit at UB. Partnering with network engineers you will work on ways to automate changes and improve effectiveness of the team.

Your responsibilities include:

- Select and pilot network applications
- Transition from legacy closed-source products to commercial or open-source applications, reducing technical debt

- Share performance and availability information via public dashboards
- Maintain the NCS code base
- Design, configure, and maintain systems, applications, and complex monitoring tools; support and administration of enterprise-level networking software systems
- Ensure availability and maintainability of on-premise and cloud-based applications of critical voice and data systems
- Evaluate, configure, and support vendor-supplied utilities and software packages; make recommendations for usage and adoption
- Automate processes and integrate third-party systems using APIs to transfer data between network-based systems
- Apply orchestration technologies where appropriate for implementation
- Understand application/script development, quality assurance and data integration methodologies, using source control systems like Git
- Understand core networking components (routers, firewalls, wireless management, VoIP, VPN's, switches and related operation systems
- Collaborate with customers and technical colleagues with varying backgrounds

It is a great time to join **UB Information Technology (UBIT)**! Our staff are highly skilled and motivated to succeed and have cutting-edge training and technical resources at their disposal. For more information about UBIT visit our [website](#). All the duties and responsibilities listed above continue to occur in a 24x7 environment, therefore, working extended hours, holidays, or varied hours may be required.
